

Villa Manager — Quick Walkthrough

For Sense8 Samui Villas & Samui Emerald Villas

This is a simple web app to handle electricity billing and expenses for both properties. You can open it on your phone or computer — no login needed right now, just the link.

■ One thing to expect

It's currently on a free server. If nobody has opened it in a while, the very first page load can take 30–50 seconds while it "wakes up" — you might see a blank or loading screen for a bit. That's normal, just wait a moment or refresh. Once we're happy with the app, upgrading to a paid plan (a few dollars a month) removes this delay entirely.

What's in the app

■ Dashboard

The home screen. Shows total billed for each property, what's still outstanding, a monthly billing history, and a new Net Income view — what's billed minus what's been spent.

■ Readings

Where meter readings get entered each month, villa by villa. It automatically shows the previous reading and calculates units used and the amount owed.

■ Invoices

Once readings are entered, invoices are generated automatically for every villa. Each one can be downloaded as a PDF, or you can download all of them for a given month in one go.

■ Expenses

A place to log costs — either general to a property (like staff wages or shared maintenance) or tied to a specific villa. Each expense gets a category so it's easy to see where money is going.

■ Villas

A register of all 23 villas across both properties, with occupant details, occupancy type, and billing rate.

Where things stand

Everything above is working and has been tested. The Expenses section is brand new, so if the categories (Maintenance, Repairs, Staff Wages, Utilities, Supplies, Insurance, Other) don't quite match how you track costs day to day, that's an easy thing to adjust — just let Nick know what you'd actually want to see there.

Have a look around, click on things, nothing will break. Any questions or things that feel off, just message Nick directly.
